# 5G HD SERIES

DEUTZ-FAHR 5105.4G HD - 5115.4G HD

### EXTREME VERSATILITY.

With the 5G Series, DEUTZ-FAHR now offers a range of tractors with unrivalled efficiency. The 5G Series has been developed and extended compared to the previous series, to offer a tractor range that will suit any working conditions.

Modern, stylish machines, designed to give maximum working versatility, with flexible specification options to satisfy the requirements of the most demanding customers.

In addition, its unique features enables the 5G Series to guarantee an unrivalled level of safety under any work conditions.

FARMotion Common Rail Tier4i engine, 4 cylinders, turbo intercooler, with DOC exhaust gas post-treatment system.

5-gear transmission, with a wide range of possible configurations: up to 60 speeds in each direction and the possibility of travelling up to 40 km/h ECO.

SenseClutch hydraulic shuttle controlling 5 levels of modulation and a Stop&Go function.

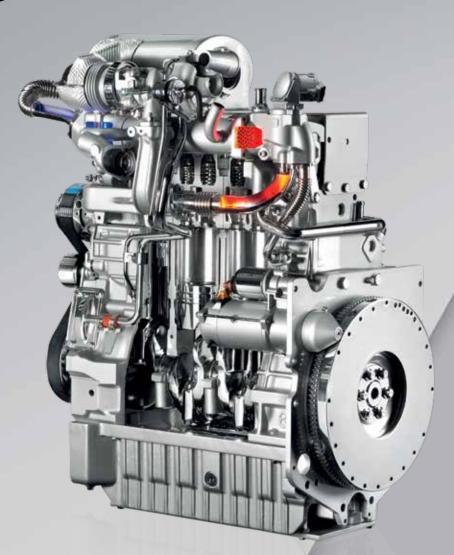

Full braking system with discs on all 4 wheels

High flow hydraulic system.

PTO up to 4 speeds: 540/540ECO/1000/1000ECO.

Lift capacity of up to 5400 kg depending on the model.

4-post cab: incomparable comfort and visibility ideal for working with a front loader.

# MAXIMUM EFFICIENCY WITH THE DEUTZ-FAR FARMOTION ENGINE

The fuel supply system uses new, 7-hole injectors and Common Rail technology with maximum operative pressures of up to 2000 bar. This maximises the immediate response to sudden load variations and at the same time decreases polluting emissions.

Highly flexible and with torque reserve values of 30-35% depending on the version, the FARMotion engine is predominantly for agricultural use.

The new, sturdier FARMotion engines use cylinders with thicker, extractable liners (to simultaneously increase resistance to cavitation erosion and reduce noise and vibrations) and a new, forged steel crankshaft to make them more robust and give improved balance.

The new engine block has been strengthened for increased reliability and durability; this is appreciated most when the tractor is fitted with a front loader.

Regular maintenance of the FARMotion is now very easy, thanks to the single, multi-purpose belt with automatic tensioner (which requires no manual adjustment) and to the automatic, hydraulic valve lash adjuster, also maintenance-free.

The new powershifts are electronically controlled under working conditions: dedicated sensors constantly monitor and optimise all the operating parameters and diesel injection is adjusted to ensure a stable, constant performance. The response to speed and load variations is rapid, direct and precise. The hand accelerator lever and engine speed programming function enables you to set, maintain and recall the required speed for the job in hand.

### EASY MAINTENANCE

Oil check.

Radiators.

Air filter.

### THE RIGHT SPEED FOR EVERY APPLICATION.

Transmission configurations in the 5G Series are flexible and efficient.

5-gear versions, up to 4 work ranges (slow, fast, underdrive and supercreep), 2- or 3-gear Powershift, hydraulic shuttle: the wide variety of options allows almost unlimited variations, capable of fulfilling all your work speed requirements. In practice: from 40 to 60 speed gears for each direction of travel and the possibility of travelling at 40 km/h with the engine in economy drive.

A press of the button on the gear lever and without using the clutch pedal, the Hi-Lo can reduce (or increase) the gear speed when loaded by approximately 16%. This option is particularly useful when working on very uneven terrain. A 3-speed Powershift uses the same method to further decrease the transmission ratio which helps when transporting heavy loads and encountering road inclines. To facilitate quick, repetitive operations, the shuttle lever is located in an ergonomic position to the left of the steering wheel.

In the HD versions, shuttle control is hydraulically adjusted with a 5-position modulation control; this option is useful in terms of productivity and safety, especially if the machine frequently operates in a restricted area with a front loader. In addition, the hydraulic shuttle is equipped with two sets of multi-disc, oil-immersed "Long life" clutches to reverse up to 13 km/h, even when loaded. The HD versions also have the Stop&Go, which allows you to stop and restart the tractor without having to use the clutch pedal.

To couple equipment efficiently, the PTO on the 5G Series has 4 standard speeds (540/540ECO/1000/1000ECO), with electrohydraulic engagement. An optional front PTO which operates at the standard 1000 rpm can be fitted with the front hitch.

The hydraulic shuttle lever has a useful modulation control function to change reaction time to a change of direction. The roller wheel can set 5 different levels of speed sensitivity.

The gear lever with Powershift speed change buttons and the ComfortClutch electro-hydraulic clutch button.

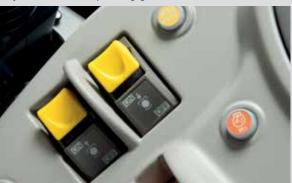

Stop and Go activation via push button.

The PTO is simple and logical to handle, thanks to the electro-hydraulic controls on the right-hand console and on the rear fenders. The engine revs are shown on the instrument panel which moves with the steering wheel adjustment to ensure clear unobstructed view of the operating speeds.

In the versions with an electronically controlled hitch, the Auto PTO function allows you to automatically stop and start the rear PTO in conjunction with raising or lowering the rear linkage.

Easy mechanical PTO speed engagement.

Electro-hydraulic switches to engage PTO.

# 8-9

## STRENGTH AND PRECISION. CONTROLS AT YOUR FINGERTIPS FOR SIMPLE, PRECISE OPERATION.

New lift control buttons.

Control panel for rear lift settings.

External PTO and rear lift controls for straightforward equipment mounting and external PTO operation.

The electronically controlled (EHR) standard rear lift uses a pair of extension sensing load cells situated near the lower link arms as draft sensors. Maximum lifting capacity, measured at the quick hitches for the 5115.4 HD is an impressive 4855kg (in standard configuration). Boasting extraordinarily precise draft and position control, in addition to mixed mode (and, of course, floating mode), the EHR electronic lift management system also performs a number of other functions: quick soil engagement, oscillation damping for transport use with implements

mounted on the 3-point linkage, position lock, lift height limiter and rate of drop control. Controlling the lift from the cab is made even simpler by the new control button layout and an additional control in a set back position to the right of the driver seat for easily adjusting the position of the lower arms of the rear lift when hitching implements. Maximum load capacity of the (optional) front lift is 1,850 Kg at the quick hitches.

### 5G SERIES AND FRONT LOADER: A WINNING DUO.

Indispensable for all applications, front loaders make the farmer's daily tasks easier and more productive. They optimise farm activities where a tractor with a loader is used on a daily basis.

The factory-fitted Loader Ready Kit allows you to exploit the tractor-front loader configuration to the full. The Loader Ready Kit, together with all the unique features of the 5G Series, makes these tractors perfect to use with DEUTZ-FAHR front loaders.

### A COMPLETE PACKAGE

- + strong, high maximum loading front axle.
- + high visibility cab roof window with FOPS protective structure.
- + SDD rapid steering system which halves the number of steering wheel turns and reduces manoeuvre times (5115.4G only)
- + Stop&Go to stop the tractor using the brake pedals only.

Push buttons to activate the  ${\tt Stop}{\tt \&Go}$  and SDD functions.

The loader control joystick integrates perfectly in the right-hand console.

The SDD rapid steering system. Half the wheel rotation, double the steering power.

Wide glass sunroof for optimal vision when using front end loader.

### THE NEW STANDARD IN COMFORT AND FUNCTIONAL DESIGN

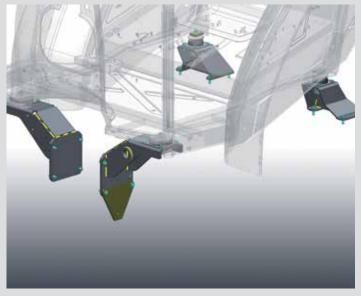

The 4-post cab provides excellent visibility under all working conditions and guarantees a functional work environment with superior comfort and well laid-out controls.

The carefully designed space, eye-catching contours, innovative materials, passenger seat and ergonomic layout of the controls, divided into a logical "colour-coded" sequence, all put the 5G Series cab at the top of its class.

Up to 8 work lights (6 on the cab roof and 2 mid mounted on the cab corner posts) allow you to illuminate your entire work area at night.

The standard rear LED warning lights ensure maximum on-road visibility. Lastly, the back-lit instrument panel and side console allow the operator to clearly identify each individual control.

Cab vibrations reduced up to 40% thanks to "Hydro Silent-Block" suspension.

Ergonomic, quiet and comfortable cab.
